

# GSBKit Government Demo One-Pager

Prepared June 11, 2026 | [gsbkit.com/government/demo-kit](https://gsbkit.com/government/demo-kit)

## What GSBKit Shows in 10 Minutes

GSBKit is a lightweight web accessibility and language-support widget with a dashboard for site owners. The government demo uses a Utah-style public services page to show practical readability, focus, translation, and reporting workflows.

### Demo Flow

- Open </demo/utah-services> and show the public-services page before the widget is used.
- Launch the widget and show reader mode, focus tools, translation, and visitor support controls.
- Open </transparency/acr> to review support levels, known limits, and follow-up items.
- Show the one-script install model and dashboard site-management flow.

### Procurement Package

- Public Accessibility Conformance Report: </transparency/acr>
- Transparency notes: </transparency>
- Federal readiness tracker: </government/sdvosb-certification>
- Utah procurement tracker: </government/utah-procurement>

### Clear Boundaries

GSBKit improves access support and reporting. It is not a legal guarantee, does not replace human review, and should be paired with code fixes, content review, and assistive-technology testing for higher-risk public services.

### Pilot Ask

Pick one public page, one technical contact, one accessibility contact, and a two-week review window. GSBKit can be installed with one script tag and reviewed against the ACR and public transparency notes.
